Career Summary

Erick has been working as a Test Automation Engineer since July 2020 working with technologies like Java & JUnit, Gradle, Spring, Javascript, WebDriverIO, Cucumber and Selenium, specifically automating API and E2E test cases. Currently, he is focused on creating and running automated front-end / web-ui tests. It is also responsible for the daily monitoring of the results of the automated test suite, the reporting of errors found to the development team, and the help in detecting their origin and their resolution. Previously, he was dedicated to developing in React.js, working on an internal Globant project, the StarMeUp component suite. He already has experience in some Front Tech (ReactJS, React-Native, based on javascript) to have more than one profile. He has solid knowledge in the use of the Git versioning system, and has worked as a team with agile methodologies.
